

Natac Group is committed to protecting and caring for the environment. We seek to minimise the impact of our activity by guaranteeing the sustainable development of all the Group's activities and facilities throughout their lifecycles, and by respecting our environment and the social well-being of current and future generations.

The work of Natac Group is the **production of powdered plant extracts** for use in food products, animal feed, nutritional supplements, and pharmaceutical ingredients.

Our mission consists of contributing to society in a positive way. This idea is also at the heart of **Natac Group's** philosophy of sustainability, which involves instilling in the company the balance between economic growth, care for the environment and social welfare, and working on the implementation of a comprehensive sustainability policy. We make this commitment a reality with the publication of our **Annual Sustainability Report**.

In order to improve our environmental performance, we have implemented and defined an **Environmental Management System, based on ISO 14001**. The principles of this policy are:

- Ensuring compliance with the environmental legislation and regulations that apply to the company's activities and facilities, as well as compliance with other commitments assumed voluntarily by the organisation.
- Continuously improving our environmental performance and our Environmental Management System.
- Minimising waste generation and using material and energy resources responsibly.
- Reducing water consumption and preventing runoff into the aquatic environment.
- Preventing accidental contamination.
- Promoting a culture of respect for the environment at all levels of the company through training, raising awareness and motivating all the company's staff by transmitting the importance of environmental protection and minimising our impact on the environment.
- Encouraging the improvement of the environmental behaviour of our customers and the stakeholders we can influence.
- Ensuring that the principles of this Policy are applied by everyone who carries out any activity at our company's facilities.
- Promoting visibility and transparency in terms of communicating the results of Natac Group's environmental performance.
- Being proactive about the application of best environmental practices at the company, promoting and encouraging sustainable behaviour and preservation of the environment, in order to achieve environmental leadership in the Group's area of activity.
- Participating in programmes, forums, organisations and other similar activities that promote sustainable supply chain development.
- Strengthening our commitment to the fight against climate change and reducing the emissions associated with our processes and our overall supply chain, by means of energy efficiency and sustainable mobility.
- Establishing environmental objectives and goals.

Management is committed to implementing this policy and encourages everyone at Natac Group to collaborate with its application and compliance.

Alcorcón, 27th of April, 2022

Antonio Delgado

Chief Executive Officer
